PHOENIX FREEDOM 1 LITRE

User Guide

Welcome to Phoenix!

Thank you for buying the Phoenix Freedom! Congratulations on your first step to creating a healthier life and greener planet.

To fully benefit from the support that Phoenix offers, register your product online today.

What's in the box?

- A. Lid
- B. Stainless Steel housing- upper chamber
- C. Stainless Steel housing- lower chamber
- D. Phoenix Spirit Freedom Cartridge w/
Activated Carbon

Important

Read this user manual carefully before you use your Phoenix Freedom and save it for future reference.

Warning

- Children should be supervised to ensure that they do not play with the water filter.
- The cartridges and accessories are designed for use with the cold or room temperature water. Hot water may damage the filter.

Features

- The housing of the Phoenix Freedom is made of grade 304 Stainless Steel.
- The filtration system consists of a 3 stage ceramic filtration candle.
- ***First Stage:*** The first stage consists of the Phoenix Spirit ceramic which is manufactured to provide genuine sub micron filtration. The cartridge reduces

fine particulate matter, bacteria, cysts and turbidity.

- ***Second Stage:*** The incorporation of silver locked within the ceramic structure inhibits the growth of bacteria and gives enhanced bacteriostatic and self sterilizing properties.
- ***Third Stage:*** An inner core of activated carbon block removes chlorine, VOC's and industrial solvents.

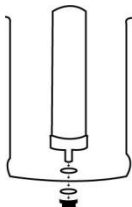

Applications

- Only use the Phoenix Water Filter to filter water that meets the drinking water standards.
- Do not use filtered water in aquariums or to water plants, it can be harmful to the fish and the plants.

Installation

Step 1:

Insert one rubber ring over the stem of the cartridge (D) and place it in the hole provided in chamber (C). Insert another rubber ring over the

stem on the outer side of (C) and using the wing nut, tighten it firmly. You will not need tools to tighten the nut. The rubber rings will hold the tap in place preventing possible leakages.

Step 2: Finally place chamber (B) over chamber (C) and close it with the lid (A).

The installation of the filter is now complete, hassle free.

Usage

Fill tap water in the upper chamber for great tasting pure drinking water on demand in the lower chamber.

When using brand new cartridges, it is advisable to dispose of the first 8 litres of filtered water. Doing this removes the discoloration of the water due to the unused activated carbon, as well as relieving the muddy taste of the freshly manufactured ceramic.

A reduction in the flow rate indicates the need to clean the filter. Scrub the candle under running water with a scouring pad to expose a new layer of ceramic. However, due to the activated carbon exhaustion, the Spirit cartridge is to be replaced every six months.

The Phoenix Spirit candle offers a lifetime of 3000 litres or 6 months, whichever comes first. When not in use air-dry the spirit cartridge for a minimum of 24 hours then store in dry place.
